Leckenby Seed Co. Seattle, Wash.

In one corner of a field of Penn State Cabbage still stands the blockhouse built in 1855 by the great-great-grandfather of Mrs. Jim Leckenby, as protection against the Indians.

Between the mountains and the sea lie the rich delta lands that produce LECK-STRAIN seed crops. Many of these fields are below sea level where they are protected against tide waters by retaining dikes.

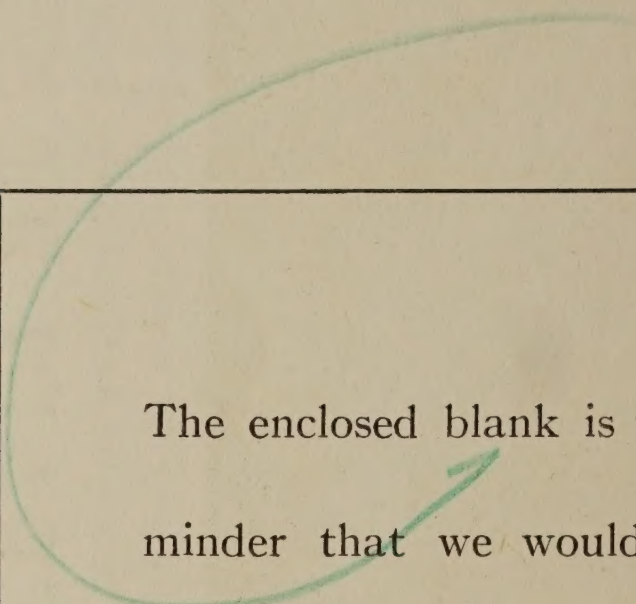

Selective Plant Breeding Improves Strain.
Illustration Shows Latest Development of

PENN STATE BALLHEAD

Our stocks are certified as First Generation from foundation seed supplied each year by Pennsylvania State College; a special feature of

LECK-STRAIN SEED PRODUCTION

The enclosed blank is a reminder that we would like to have an inquiry for your requirements of select strains of Puget Sound grown seed 1945 crop contract.
